Reviews and Testimonials

Business Insiders

"The programme gives an excellent insight into trading and equips the students with the actual skills to trade like a professional. I recommend it for anyone with an interest in perusing a career in finance." Blake Strong, AGL Trading, NY. NY.

"We took on one of NYCC's graduates and now she is one of our biggest earners. This course may be the way forward for future finance students." Rosemary Steinway, Bluewater Finance, NY.

Graduates

"After finishing the one month Professional Trading Course I got an internship with a trading company. I feel like I'm on my way to a promising career. Thank you NYCC." Jane Maxwell. NYCC Graduate.

"I took my wife to New York for our Ten Year Anniversary and have actually made money from it We both did the Two Day Intensive and had the time of our lives She always had an interest in stocks and trading and was so happy to have her dream come true." Dean Cantwell, NYCC Graduate

"The course was a life changing investment. I have built up a solid investment portfolio and am in control of my finances. I trade when I want and now have the skills to read the market and play the game." Jack Finch NYCC Graduate

What are cryptocurrencies?

Cryptocurrencies are essentially just digital money, digital tools of exchange that use cryptography and the aforementioned blockchain technology to facilitate secure and anonymous transactions. There had been several iterations of cryptocurrency over the years, but Bitcoin truly thrust cryptocurrencies forward in the late 2000s. There are thousands of cryptocurrencies floating out on the market now, but Bitcoin is far and away the most popular.

Current & future uses of blockchain technology & cryptocurrency

Since its inception, Bitcoin has been rather volatile. But as the market capitalization of Bitcoin currently sits at 199.62 billion U.S.D. the prospect of grabbing a slice of the Bitcoin pie has become far more attractive.

As for blockchain technology itself, it has numerous applications, from banking to the Internet of Things. It will also transform how health records and connected medical devices store and transmit data.

What is blockchain technology?

The origins of blockchain are a bit nebulous. A person or group of people known by the pseudonym Satoshi Nakamoto invented and released the tech in 2009 as a way to digitally and anonymously send payments between two parties without needing a third party to verify the transaction. It was initially designed to facilitate, authorize, and log the transfer of bitcoins and other cryptocurrencies.

It's a shared database populated with entries that must be confirmed and encrypted. Think of it as a kind of highly encrypted and verified shared Google Document, in which each entry in the sheet depends on a logical relationship to all its predecessors. Blockchain tech offers a way to securely and efficiently create a tamper-proof log of sensitive activity (anything from international money transfers to shareholder records).

Long term investment

We will give you the knowledge to make smart choices and create a long term investment plan

Day Trading Cryptocurrency:

The main difference between day trading cryptocurrency and day trading real-world assets is volatility. That is the price of cryptocurrency move up or down really quickly. The price of a coin can rise or fall by more than 10%-50% in a single day. We will teach you the best strategies for this practice and which exchanges are best.

How to choose an exchange

The main factors to take into consideration are security measures, prior security breach history, fees and pricing, coin variety and customer service.

**TO 5 Recommended
Crypto Exchanges:**

- Coinbase
- Simplex
- Binance
- Kraken
- Bittrex
